

Jolly Server

Advanced Data Protection and Performance

Share settings between workstations while protecting your valuable data and improving program performance by installing the Jolly Server in your deployment. Built around Microsoft SQL Server 2008, the Jolly Server acts as a central repository for your Jolly application data. Jolly Server is required for network installations of Jolly desktop products. Jolly Server provides enterprise level performance and reliability.

Jolly Server Highlights

High Availability

Ensure business continuity with the highest levels of system availability through enterprise-grade technology.

Performance

Built on technology with a proven record in handling large amounts of data and critical enterprise workloads.

Security

Provides a secure environment that protects your data against unauthorized access.

Advanced Networking

Easily handle many simultaneous client connections securely and efficiently.

Centralized Mangement

Manage configuration settings and generate secure backups of your data in one central location.
