

Label Flow Release Notes

Release 6.3.25

Release Date: 4/2/2013

Note 1: Read 6.0 Release Notes if upgrading from version 5 or earlier for important information.

Enhancements / Bug Fixes:

- Fixed an issue with PDF417 barcodes not encoding certain characters properly
- Fix Light Client bug where Workstation Options would be reset after connecting to Jolly Server

Release 6.3

Release Date: 10/11/2012

Note 1: Read 6.0 Release Notes if upgrading from version 5 or earlier for important information.

Enhancements / Bug Fixes:

- Database schema editor now supports MS SQL Server based databases
- Light Client now supports multiple Groups
- All desktop products including Jolly Server now support Windows 8 and Jolly Server 2012
- Easily convert from Jolly Internal Server to Jolly Server
- Fix for loading images from the web with special path characters

Release 6.2

Release Date: 06/26/2012

Note: Read 6.0 Release Notes if upgrading from version 5 or earlier for important information.

Features Added:

- Added new "Lite Edition" to all products that can only be used for a specific purpose; replaces Print Station, Report Station Editions
- Label record data can be stored in the Jolly Server

<http://www.jollytech.com>

Enhancements / Bug Fixes:

- Jolly Server installers now create a 2nd database containing the tables from the Sample Database
- The Sample Database data source option has been renamed to Internal Jolly Server and is no longer visible when connected to the Jolly Server; if the user still needs to connect to the Sample Database when using Jolly Server, they should use the MS Access data source option; this is automatically selected by the software if already configured to use the Sample Database while connected to Jolly Server
- Added "Auto-update record" and "Send e-mail" functionality to the new record process
- The Print button is now available in Designer > Database Setup UI
- Added support for building a record form drop down list containing all values present in the associated database column
- Fixed an error that occasionally occurred when printing to Zebra RFID printer
- Fixed a bug where Workstation Profiles were not saving properly
- Other minor bug fixes and feature enhancements

Release 6.1

Release Date: 02/17/2012

Note: Read 6.0 Release Notes if upgrading from version 5 or earlier for important information.

Enhancements / Bug Fixes:

- Tool to migrate data from Jolly Internal Server (JLT file) to MS SQL Server-based Jolly Server
- Save advanced, driver-specific printer settings
- Improved support for non-English characters
- Fix for workstation options reverting to defaults when the software is restarted immediately after being shut down or launched twice in quick succession
- Miscellaneous bug fixes

Release 6.0

Release Date: 11/16/2011

Note 1: Microsoft .NET Framework 4.0 or newer is required

© 2012 Jolly Technologies Inc. All rights reserved.

<http://www.jollytech.com>

Note 2: Record filters have been enhanced; any stored filters you have created will need to be updated.

Note 3: Workstation Settings and Label Group settings have changed; review your settings after upgrade.

Note 4: Shared Company Files (.jlt) are no longer supported; you must use Jolly Server when sharing visitor data between multiple workstations

Features Added:

- RFID label support
- QR Code support

Enhancements / Bug Fixes:

- Replaced Company Server with Jolly Server, a more robust implementation
- Improved locking to protect shared resources
- Simplified Workstation and Label Group Settings
- Multiple workstation printer support
- Added Task Configuration button to each task
- Auto-format label text
- Support for additional languages
- Minor bug fixes and enhancements

Release 5.1.0

Release Date: 03/16/2011

Note: Microsoft .NET Framework 3.5 SP1 or newer is required

- Link Label Flow user accounts to Active Directory user accounts
- Improved Oracle support

Enhancements / Bug Fixes:

- Support for a 15 digit UID default value
- Improved support for non-western languages and fonts including Arabic, Cyrillic, Greek, Hebrew and Turkish
- Display a results summary after record import
- Minor bug fixes and enhancements

Release 5.0.2

Release Date: 10/06/2010

Features Added:

- None

Enhancements / Bug Fixes:

- Minor bug fixes and enhancements

Release 5.0 / 5.0.1

Release Date: 07/26/2010

The version 5.0 family of products offers new functionality that version 4.0 clients cannot utilize so if you have multiple installations that share data, you must upgrade each installation.

Features Added:

- Significantly improved database performance when connecting to large and/or remote databases
- Configure separate printers for printing labels and reports
- New Record Center record filter option
- Company Database can be installed to user's existing MS SQL Server instance; user can then manage the database and access log data
- Support for Microsoft Access 2007
- On screen keyboard and other kiosk improvements
- Tutorial demo links added to Help menu

Features Enhanced / Modified / Bug Fixes:

- The design preview shown in the Main Menu is now a static image that can be set by the user
- Fixed problem where the software would not always completely terminate when closed
- 100+ general UI and feature enhancements
- Several minor bug fixes

Release 4.3

Release Date: 07/23/2009

Important Note: Due to enhancements to date / time and database field comparison, existing print conditions, record filters and auto record updates should be reviewed after upgrading from previous versions.

Features Added:

- Check for duplicate records

Enhancements / Bug Fixes:

- Significant performance improvements when working with large, networked databases
- Immediate discovery of records added via other workstations
- Allow workstation profiles and groups to be shared between Jolly products
- Added authentication to e-mail server settings
- Additional auto-update record field options and data
- Minor bug fixes and UI enhancements

Release 4.2

Release Date: 02/27/2009

Features Added:

- Added Setup Wizard for label group and workstation configuration
- Global Settings synchronization

Enhancements / Bug Fixes:

- Redesign of record layout and data formatting UI's
- Addition of 4 new log report fields
- Added option to only show background image on default screen
- Improved support for date / time related conditions
- Minor bug fixes and UI enhancements

Features Removed:

- Numeric data formatting has been removed with the exception of decimal places

Release 4.1

Release Date: 12/18/2008

Features Added:

- Added Record Queries to Report Center
- Set workstation background color and image

Enhancements / Bug Fixes:

- Redesign of label group setup
- Simplified auto-update database fields configuration
- Improved auto-resize font performance
- Added new profiles, cardholder groups and samples
- Updated language database
- Improved record layout functionality
- Improved startup times and overall performance
- Improved database connectivity times when connecting to large database with many tables
- Minor bug fixes and UI enhancements
